

ABSTRACT

A hypermedia document display method can include presenting hypermedia content, the hypermedia content containing hyperlinks to additional hypermedia content; storing selected ones of the hyperlinks in a delayed viewing list; and, caching hypermedia content associated with the stored hyperlinks during the presenting step.

5 The method can further include reconfiguring the stored hyperlinks to point to the cached hypermedia content. The presenting step can include displaying Web content in a Web browser. In that case, the Web content can contain hyperlinks to additional Web content. The presenting step also can include playing back multimedia content in a multimedia content player. Finally, the presenting step can include displaying
10 audiovisual television content combined with hypermedia content in a television set.
